

Flood Risk Management 'Slowing the Flow'

a presentation by
Barry O'Connor – Mott McDonald Ltd

Flooding is a natural process that appears to be more prominent around the globe in recent years. With climate change, the frequency, pattern and severity of flooding is forecast to change and become even more damaging.

In this presentation, Barry O'Connor from Mott MacDonald will discuss Flood Risk Management measures and techniques with focus on methods to reduce peak flows in areas at risk from fluvial flooding.

This presentation will be of value to engineers with a range of responsibilities, including designers, project managers and engineering managers.
